# *How many messages did you sent on May 2nd 2018?*

**"Liberty requires security without intrusion, security plus privacy."**

— Bruce Schneier  
*The Eternal Value of Privacy*

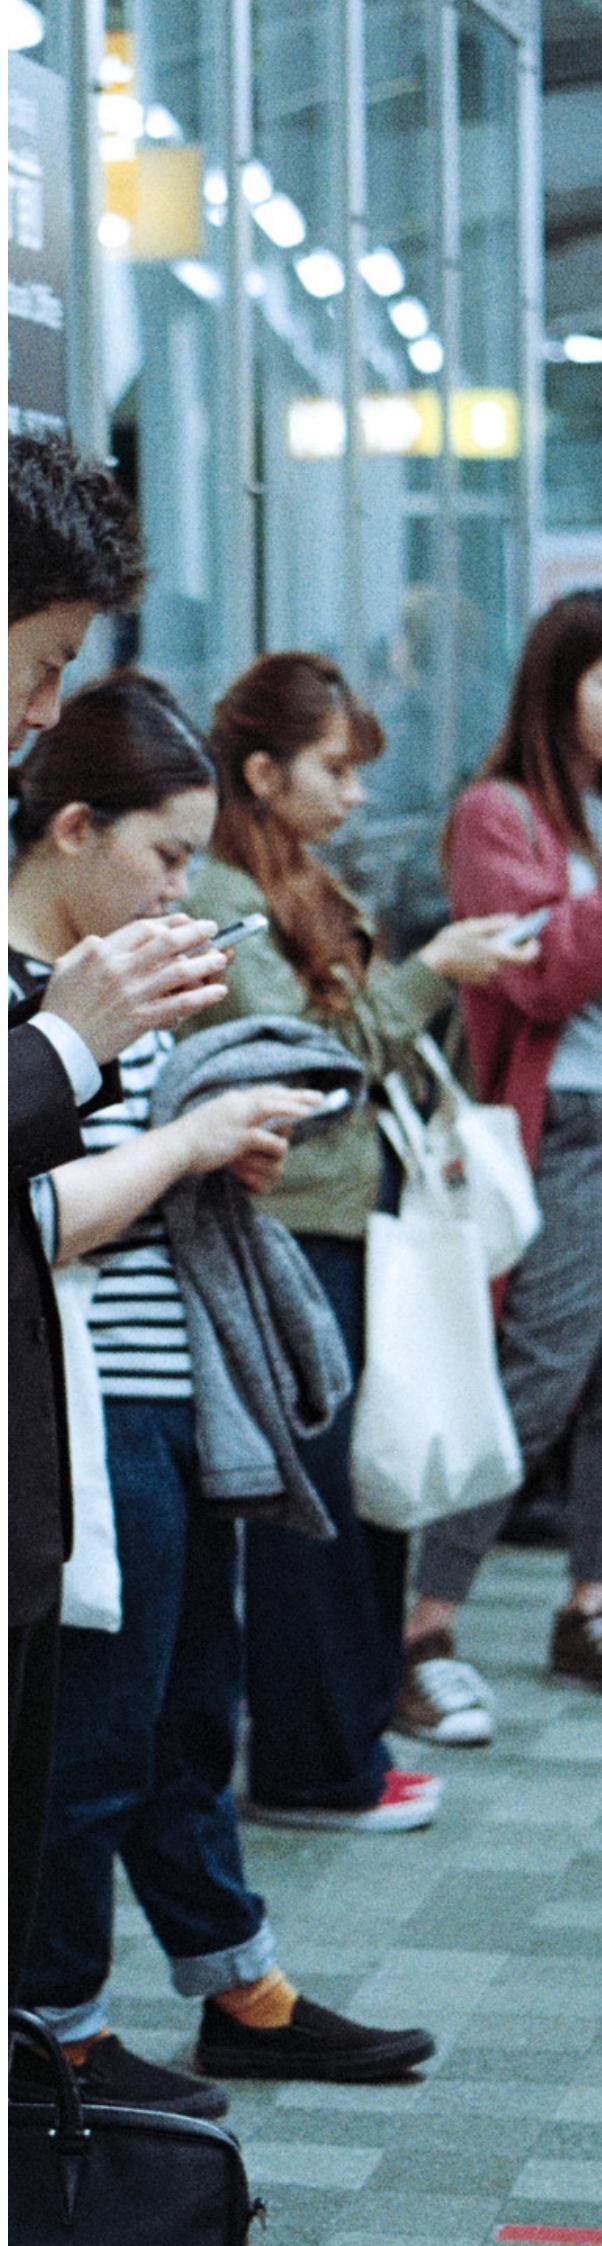

## Get back your privacy.

New instant messaging applications appear every day on the market. Developers and application owners generally put commercial gains first, and criteria such as user anonymity and confidentiality are of secondary importance. However, we cannot no longer accept this.

Berty is an exigent alternative to instant messaging applications. At Berty, we believe that security and privacy of messages should not be an option but should be reflected by default in the application. That's why we have built a secure messaging application using the best encryption protocol available. We have also made the choice that no messages are stored on a central server, even if they are encrypted. We believe that decentralization and encryption is a secure alternative. In addition, we collect as little metadata as possible. In this way, we hope to provide an application that guarantees the anonymity and confidentiality of our users. Berty is a security-first messenger developed by Berty Technologies.

You deserve privacy.

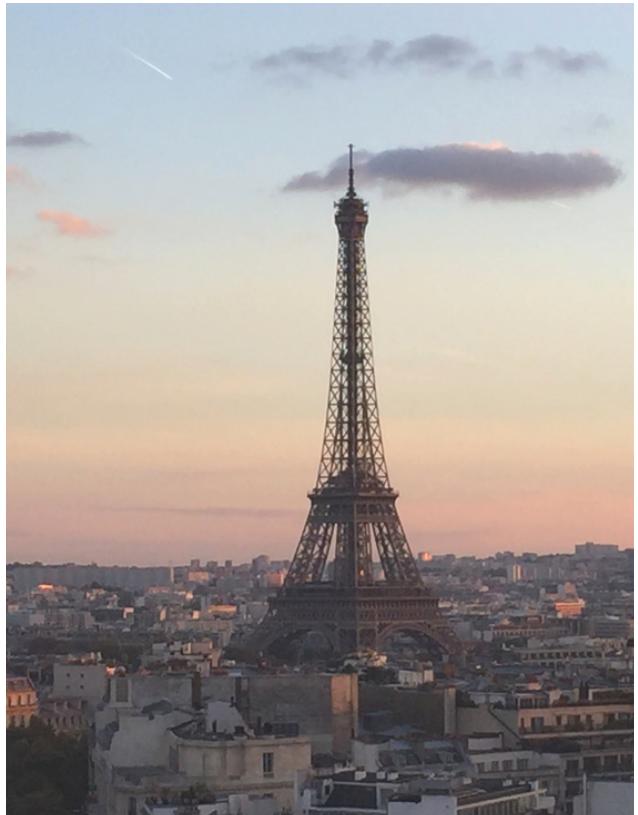

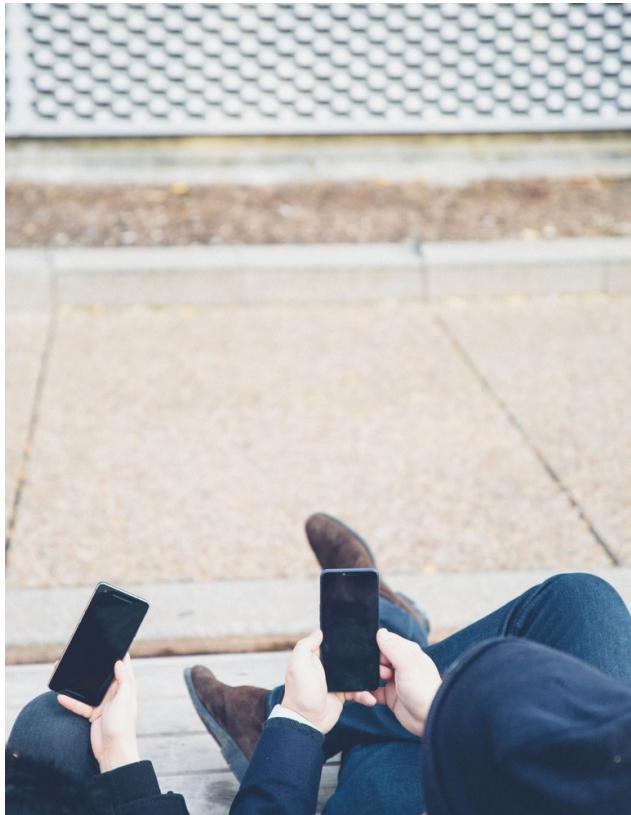

**"Our mission is to create secure communication tools that allow everyone in the world to be free. We don't want to know anything about you or even have control over berty. Your freedom is and will always be our main concern."**

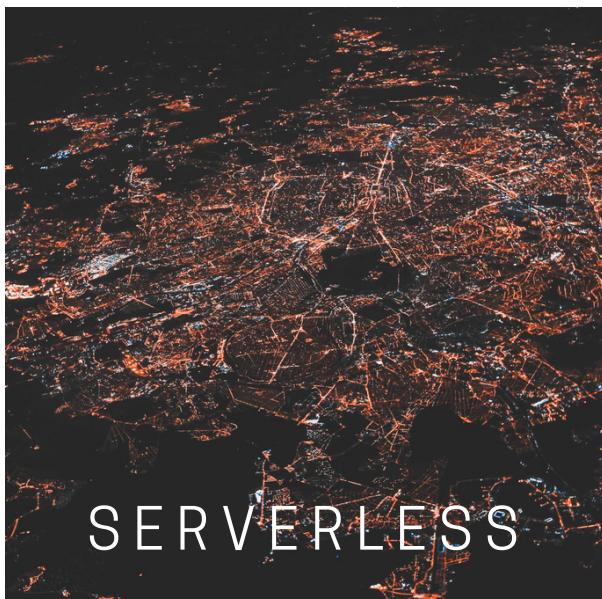

**MANFRED TOURON**  
Founder of Berty

# About Berty Technologies

Berty Technologies is a French non-governmental and non-profit organization. Created in May 2018, Berty Technologies' team is located in Paris (FR) and is now staffed by 12 people, half of whom are developers.

Berty Technologies' vision is to create secure communication tools and to fight censorship in order to create an opportunity to connect with people all over the free world.
